## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-12 and 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogoe et al. 5,663,280, Ogoe et al. 5, 041,479 or Buysch et al. 5,339,600, in view of Mark et al. 4,130,530.
3. All references have been discussed previously. It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to add the cyclic siloxane of Marks et al. to the composition of the primary references, in order to depress the melt viscosity without lowering the impact strength.

### ***Response to Arguments***

4. During the previous actions the examiner misread the Marks et al. reference. Applicants are absolutely right; the addition of cyclic polysiloxane does not improve the impact strength of the polycarbonate. However, said addition reduces the melt viscosity without loss of impact strength. See column 1, lines 45-51, of Marks et al. This makes fabrication of polycarbonate articles easier. Accordingly, the Declaration of Mr. Singh does not address the focal point of the instant rejection. The rejection is maintained. Since the rationale of this rejection has been change due to this examiner's error, the rejection will not be made final. The examiner regrets the error.
5. Any inquiry concerning this communication or earlier communications from the
